

CoulombOnly: transition velocity and downstream deposit

Matched numerical/physical protocols

Aligned-peer IQR
com1DFA
Candidate (1200 s)
Aligned-peer median
Baseline (1200 s)
Supplied DEM at reference path

Thalweg runout at PFT > 0.5 m: baseline 2875.0 m; candidate 3130.0 m. Aligned spatial peers: 8.
 Peak-field cross-flow envelopes are not particle tracks or simultaneous states. Shading marks the DEM-derived concave bend.
 PFT panel dotted line: 0.5 m runout threshold. Peer median/IQR use every aligned peer; full profiles and hashes are in the JSON.
